MIGUEL FERREIRA

Software developer

miguel.personal@pm.me | +351 916 267 819 | www.mifer.me

Profile

I'm a software developer with an entrepreneurial mindset, who's creative and loves to give his little twist to problem solving.

I've been working in the software industry for more than 6 years and worked on different challenges across my career.

Although I have a special interest in systems design and backend development, I like to try out new things and solve all the problems that come "into my desk".

Experience

Software developer

Bizview | 2019 - 2021

Started as an intern and ended up working on the company part-time.

At Bizview I developed two main apps - one in the medical field and other in education - with the focus on mobile development.

Developed skills such as:
- Mobile development with Flutter
- Backend development with Laravel
- Web development with NextJS

Member & coordinator

NEI ISEP | 2022 - 2025

Started as a member in this association and ended up climbing up the mountain to a management position as the coordinator of the informatics department.

This was the biggest academic challenge, as I had to face a more formal role in my institution.

My biggest achievement as a member was the creation of a platform called "Antirecurso" that allowed students to take mock exams to prepare for real ones.

Developed skills such as:
- Team management
- Deploying and scaling apps
- Event organization

CEO & Software developer

Avogg | 2021+

With the help of two friends of mine, I started a software company that has the mission of helping people in their day-to-day life through software.

We aim to create tools that are easy to use, effortlessly scalable, and accessible to everyone.

This was probably my biggest challenge, especially in the first two years where everything was uncertain and with college on the side.

Developed skills such as:
- Negotiation
- Time management
- Public speaking
- Deploying and scaling apps
- Development of low-level applications

Education

Informatics & Multimedia Technologies

Colégio de Gaia | 2017 - 2020

At Colégio de Gaia I had the honour of solidifying my passion for computer science and, specifically, programming,
Finished this course with a 4th degree of professional qualification, which is valid across all the European Union.

Computer Science Degree

ISEP | 2022 - 2025

I took a course in computer science as it has always been my passion. In this course I've learned everything related to the field, from simple coding (which I had previous experience), to development of complex systems and systems architecture - while working with some low-level systems and languages, such as Assembly x86-64.

Relevant skills

Languages

I'm fluent in the following languages:
- Portuguese (native language)
- English
- Spanish
